Two One Act Plays For Thanksgiving Day

At the request of the C.W.L. the local Dramatic Society will take charge of the programme in connection with the C.W.L. chicken supper, and this will take the form of two one act plays and possibly the services of one of the foremost conjurers in Western Canada.

Fuller details will be found in these columns next week, and the members of the C.D.S. at present slated to appear, will be, Flo Cruickshanks, Anne Cameron, Mary Murdoch, Glen Williams, Austin Williams, Alfred Stevens, Lewis Lennon, Ken McCrae, G.Y. McLean.

The chosen plays are "No Sabe" and "The Blue Teapot," drama and comedy.

Remember—October 24 Thanksgiving Day.

Davison To Speak Here Thursday Next

Mayor Andrew Davison, of Calgary, Conservative Candidate in the Bow River Constituency, will address a public meeting in the U. F. A. Hall on Thursday evening Oct. 10th at 8.30 p.m.

"Andy" Davison has a fine record of public service in the city of Calgary, being now in his third term of office, which speaks for itself. Be sure to hear him on Thursday next.

Liberal Rally at Madden, Oct. 7th

A Liberal meeting will be held in the Madden Community Hall on Monday, October 7th at 8.30 p.m.

Short addresses will be given by C. R. Walrod, Candidate, Bow River Riding; P. L. Hyde, Calgary West Riding; A. MacLeod, St. Albans.

There will also be a programme by local Scottish artists.

World Series

Detroit evened the series with Chicago taking today's game by a score of 8 to 3, after dropping the opening game by a score of 3 to 0. The teams move to Chicago where the next three games will be played. Friday's game will be broadcast at 12.30.

Interest in the World series locally is at fever heat. The Oliver Cafe is the hangout for the red hot fans. Milt McCool keeps official score and he settles all arguments on bets relating to strike outs, hits and stolen bases. The audiences is a mixed one with both Chicago and Detroit having their supporters. Everett Bills, Archie McFadyen, Frank Ruddy, Adam Cruickshank, Bunk Coffin, Hughie McIntyre, Jim Cumming, Fred Patchell can be found daily at George's listening to the broadcast and making the odd bet.

Who will win the series?

Everett Bills: Detroit will win.
Frank Ruddy: Chicago all the way.
C. H. McMillan: Chicago will win.

Archie McFadyen: Chicago has the better and younger team.

Glen Williams: Detroit is my choice.

R. T. Amery: I pick Chicago.

O. E. Jones: Chicago.

G. Y. McLean: Chicago is a cinch.

Dad Hall: Chicago is the best bet.

Hughie McIntyre: Chicago is a cinch.

Milt McCool: Chicago has the edge.

Fred Patchell: Detroit will win and I expect the series to go the limit.

Bunk Coffin: Most of the fans favor Chicago, so I will back Detroit.

Archie Anderson: Detroit.

George Lim: Detroit will come thru.

Jim Cumming: Chicago has the best team and will win easily.

Paul Allan: Detroit can spot them the first game and then take 'em.

Ira Heywood: Detroit will do it.

Lake Parsons: Chicago has the edge.

Frank Brown: Chicago will take 'em.

Luke Halsback: I am too busy to figure out the percentages, but Chicago is hot.

Bob Smart: Detroit will come from behind to win the series.

Dr. Williams: There is no stopping Chicago. Dizzy Dean and Hubbel failed to stop them in the National League.

Bill Urquhart: Detroit will win.

Fred Baker: Chicago has a great Club.

Ril Wylie: I am in Detroit.

Happy McMillan: Chicago is the club.

Jim Williams: They can't stop Chicago.

The honor of growing the largest potato in Crossfield this season goes to Bill Gilson, who brought to the Chronicle office on Monday a spud weighing 2 lbs. 15 ounces.

What a potato this is.

Legion Social Evening Wed., October 16th

A Meeting of the Crossfield Branch of the Canadian Legion was held on Saturday.

Armistice Service will be held in the Anglican Church on Sunday 10th Nov. at 3 p.m.

Comrades Lewis, May and McFadyen were appointed a committee to arrange for the Annual Dance to be held in the U. F. A. Hall on Nov. 11th (Armistice Day).

A social evening will be held on Wednesday 16th October at 8 p.m. Comrades McMillan and Lilley are in charge.

Comrade R. D. Sutherland was appointed to make arrangements for the sale of poppies on Saturday 9th Nov. These poppies are made by disabled soldiers and the proceeds are used for their benefit only.

Our Village

A number has passed since the break in the culvert on Main Street at the corner of Hammond Street, but to date no action has been taken. We are given to understand a steel culvert has been ordered and will shortly be put down.

At Osler Street corner on Main Street, a large cement block and a dangerous hole appeared on the sidewalk, making this part of the street unsightly, and should have had attention long ago.

We are wondering what has happened to the Council, overwork, or lack of time.

The riding of bicycles on the sidewalks is another dangerous nuisance that must be stopped.

I mentioned this fact in the paper a year ago, since that time the number of bicycles in town have greatly increased, and they persist in riding on the sidewalks, some of them believe they have the right-of-way over pedestrians.

The Police in Calgary have adopted a very good system—those caught riding bicycles on the sidewalk, have their bikes taken away from them for a period of two weeks.

Since setting the above the culvert on Main Street was put down Wednesday afternoon. Councillor Asmusen supervising and helping with the work.

Mr. Asmusen also did his second good deed of the day, when he grabbed a young lad riding a bicycle on the sidewalk and took his wheel away from him. This boy will be without the services of his bike for sometime as it was locked up in the town hall.

Four Candidates in Bow River

The following nominations were made on Monday for the Bow River seat.

Mayor Andrew Davison, Calgary, (Conservative.)

C. R. Walrod, Rockyford, (Liberal)

Charles E. Johnson, Three Hills, (Social Credit)

E. J. Garland, Gleichen, (C.C.F.)

Nominations for West Calgary will close next Monday for the general elections on October 14.

Police Court

T. M. Mair appeared before Magistrate Gordon on Wednesday morning, charged with allowing his son Harold (who is under age) to drive a car without a license. He pleaded guilty and was fined the minimum, \$5.00 and costs.

Frank Reid of Aldred appeared before the local Magistrate on Tuesday, charged with operating a truck without a drivers license. He pleaded guilty and was assessed \$1.00 and costs.

Corporal Cameron is checking up closely on those operating cars and trucks contrary to the provisions of the Motor Vehicle Act. Watch your speedometers and lights, its going to be costly if you dont.

Controlling The Rust Menace

Very little reflection is required to demonstrate that an expenditure of ten years' intensive work by trained scientists and \$600,000 of coin of the realm is a low price to pay for insurance of Western Canada's future wheat crops against the appalling loss which a few days of rust infestation can levy against the farmers of the West.

The \$600,000 referred to and the ten years spent in work in the laboratory and the field, it was recently announced, is the cost to the nation to date of producing an un-named wheat which, according to authorities, is able to withstand a rust epidemic unscathed and at the same time produce a kernel with all the desirable attributes of the best commercial varieties of bread wheat.

Coupled with this announcement was the further statement that this new wheat can be multiplied to a sufficient extent at Dominion government experimental farms and on private lands under government supervision to enable a general distribution of seed to be made to the farmers of the west in 1937.

These announcements were accompanied by a further declaration of considerable importance, namely, that the government intends to retain control of the source of supply of this valuable seed and to see to it that the farmers are not exploited by private concerns in connection with its distribution.

The statement means that the farmers of Western Canada will be able to secure in two years time a substantial supply of seed wheat that is guaranteed to enable them to grow a crop completely immune from ravages by rust, and at a reasonable price, probably at cost.

It is perhaps a coincidence that these announcements were made at a time when Western Canadian wheat crops were hit by the worst infection of rust that the west has known in history, but the information should put new heart into the many thousands of farmers who this summer saw their hopes of recovery blighted when millions of rust spores descended on the most promising crop in years and slaughtered yield and grade which meant reducing price to the vanishing point.

The news given in these important announcements may well mean that 1935 will be the last time that Western Canadian farmers have to suffer tremendous loss from rust infestation. This statement is made with caution, however, for although it is not usual for severe rust infestation to follow in successive years, it cannot be stated affirmatively that it will not occur again before sufficient of the new wheat is grown to make a repetition of the 1935 calamity an impossibility.

Results of the work that has been done during the ten years' quest for a rust resistant wheat and laboratory and field trials of the strains which have been produced, however, appear to indicate that the battle against rust has been won by the scientist and agronomist.

There is additional comfort for the farmer, however, in another coincident announcement and that is that some of the five strains of rust resistant wheat which are being increased this year also show a tendency to resist other diseases, those mentioned specifically being stinking smut, leaf rust and one of the varieties is reported as "moderately resistant" to loose smut.

So that it is possible that while the experts have won their fight against rust they have at the same time scored at least partial victory in the battle against some of the other diseases to which wheat is heir. To what extent these other disease pests have been overcome while the major conflict was being waged time and experiment alone will prove. It is safe to say, however, that these apparent advantages will be followed up with the same vigor that these scientists have shown in their now successful efforts to overcome the major enemy.

Definite proof that the new wheat is all that is claimed for it exists as a result of field trials and laboratory tests which have been made during the ten years the work has been in progress and particularly this season.

In field plots the new wheat showed up clean and bright while alongside it the other standard varieties of commercial wheat were sick with the disease. Laboratory and commercial tests have proven conclusively that the new wheat has milling and baking qualities equal to that of Marquis and Reward.

The tests have demonstrated equally conclusively that the new wheat has the requisite length and strength of straw, yield, earliness, appearance of kernel and weight per bushel possessed by the best of the present day commercial varieties.

In other words the new wheat fills all the requirements of the type of hard spring wheat which has made Western Canada famous in the world's bread markets and has the additional ability to withstand rust, and perhaps to withstand some of the other diseases which periodically take toll of the Western grain farmer.

Radio Clock Patented

Radio clock which requires no winding has been patented at Prague. Known as a "radio clock," which can be operated from a distance of 500 miles, it has as works a small receiving set to guide the progress of the hands. The exact time is recorded on the basis of astronomical data.

The tunnel which Persian troops dug under the wall of Dura to capture the city in 256 A.D. has been uncovered by archaeologists.

New Name Sought

Scores of letters have been received by J. R. Macdonald, Stipendiary Magistrate of Hull, England, offering alternatives to the word "dole," for which he offered a prize of \$250. So far not one suggestion is regarded as good enough for the award. One writer sent a list of 65 alternatives.

The venerable snake-lizard travels backwards or forwards equally well.

Ninety per cent. of the world's nickel supply is produced by Canada.

Empress Of Ethiopia

Claims She Is Descendant Of Queen Of Sheba

Through all the worries and anxieties brought upon him by Italy's threatened conquest of Ethiopia, Emperor Haile Selassie's most devoted companion and counsellor has been his wife, Empress Walzeru Mennen. Gifted with uncommon intelligence, astuteness and foresight, the 41-year-old Empress urged the Emperor not to yield to Mussolini's threats but to defend the kingdom to the last.

Emperor Haile Selassie is Walzeru's fourth husband. Maybe that is why she is called the "Queen of Kings." They have three sons and three daughters. They have been married 23 years, and it is said they have never had a quarrel. The Emperor like most of the higher-caste Ethiopians, is monogamous. Walzeru is his only wife.

"Walzeru" means literally "Lady of Quality." She is the daughter of a famous provincial prince, and has a very dignified and aristocratic bearing. She was educated by private tutors. The "Queen of Kings," who is fat, not fair, and 40, claims to come from the same Hamitic stock as the famous Queen of Sheba who ruled Ethiopia 3,000 years ago. She also claims descent from the glamorous Cleopatra. She is addressed by her ten million native subjects as "Your Serene and All-Just Majesty." She signs herself "The Conquering Lion of Judah hath conquered."

The Empress speaks no language except the ancient Amharic, which is of Semitic origin. All attendants who approach her shield their mouths with their white shamma (shawl).

Dionne Quintuplets: Bowl

Smartly Designed Bowl Is Offered

A surprise gift offer which will interest every parent, every child and, in fact, everyone who has ever heard of the world-famous Dionne Quintuplets, has been announced. The article offered is a cereal bowl created in the honour of the five little sisters and called the Dionne Quintuplets Birth-day Bowl. Made of shining lifetime chromium, it is 8 1/2 inches in diameter, smartly designed in modern lines, and embossed inside with a charming sculpture of the "Quint." On the rim are engraved the names of the babies—Emile, Annette, Maple, Yvonne and Cecile. Besides being an ideal cereal bowl for a child, it makes a distinctive olive and celery dish or bon-bon dish.

Readers can obtain this "delightful gift" by sending two Quaker Oats trade-markers, plus fifteen cents to help cover postage and handling charges, to The Quaker Oats Company, Saskatoon, Sask.

Heaviest Air Passenger

United Air Lines Carried Judge Who Weighed 400 Pounds

When County Judge A. W. Dulweber applied for a ticket at the United Air Lines office at Omaha the booking clerk was in a quandary. The judge weighs four hundred pounds and is probably the heaviest in the world. The clerk did not wish to offend him, but at the same time wondered if he could book him. He boarded an aeroplane on only one ticket. The company were pleased to take him without extra charge, however, as the judge was undoubtedly the biggest passenger they had ever carried, and they wished to mark the occasion.

A Strange City

Queer Place In Derbyshire, England Has Only Eight Houses

A strange city may be found in England within two miles of Chesterfield's famous crooked spire. It is another Derbyshire curiosity. Down a winding bridle-path is Tupton City—the queerest and smallest city in the world. It has only eight houses and 26 inhabitants. It is the city of nothings, for there is no church, no chapel, no public-house, no shop, no post office. No electricity or gas lamps. How or why it became a city nobody knows, but it is believed to have been founded on the ashes of a Roman camp.

The vast unexplored continent at the South Pole, Antarctica, is believed to be about the size of the United States and Mexico combined. Geographers are not certain that it is one large continent; it may be made up of islands.

The possibility of travelling to the moon, by means of a "flying chariot" was discussed by a scientific-minded bishop in England in the seventeenth century.

The temperature of one of the sun's spots is about 4,700 degrees centigrade. This is about 1,000 degrees cooler than the sun's spot-free surface.

New Type Flying Boat

Soviet Aviation Authorities Try Out Parachute Kite

A passenger and freight-carrying "parachute kite," which Soviet aviation authorities said they believed would be able to ascend into the stratosphere, had its first successful trial lifting four tons of cargo.

An ordinary freight parachute, with a dome 65 feet in diameter, was used. The load was attached with short ropes leading from one side of the parachute. The other side bulges upward, giving the lifting power. Longer ropes, running from the bulging side, also were attached to a load which, for passenger-carrying purposes, would consist of a gondola. By manoeuvring the longer rope, the crew, experts said, could steer the parachute and control its ascent and descent.

The whole combination load was called a "parachute train" in the official description by Prof. I. Gromofsky, chief of the experimental institute of the Commissariat of Heavy Industry which is sponsoring the trials. Gromofsky said he believed the parachute could carry explorers into the stratosphere and decided flying in a parachute kite as the safest mode of air travel since the parachute is always opened, assuring a safe descent.

The Machine Age

Opinion Seems To Be That There Will Always Be Unemployment

Evidently the machine age has established a situation wherein a definite percentage of the population is unemployed and allocating to the state the task of providing for these out of taxation. It is suspected that such a condition is bequeathed on all countries eventually. The American continent, until a few years ago, escaped that penalty because it was new and had the advantage of much natural resources to exploit. With the age the handicap of unemployment appears and is ineradicable by the orthodox methods of industry. While every effort ought to be made to provide work for every human being who desires it, there is a growing conviction that the problem is likely to become more acute and that the most satisfactory recourse for governments is to make provision in their budgets for the support of a percentage of the population classed as definitely outside the realm of self-support. — Brockville Recorder and Times.

Exporters Must Be Careful

Warned Against Sending Goods To Italy Without Guarantee

The Department of Trade and Commerce said it had received a cable from the Canadian Trade Commissioner at Milan warning Canadians against exporting goods to Italy without first taking careful steps to ensure payment. The cable, sent by A. B. Muddiman, urged careful dealing with Italian importers because of exchange restrictions by that government. "No shipment of goods should be made from Canada to Italy unless the Italian importer has given assurance he has obtained an import permit from the Italian authorities allowing the importation," it said.

Only Four Feet Wide

Philadelphia Is To Have Narrowest Building In U.S.

A building being erected at Philadelphia, Pennsylvania, will, it is believed, be the narrowest in the United States. It will be only four feet wide. The site of the building is all that is left of a corner plot from which the city sliced most of the ground in order to widen a street. The new building will be constructed of stainless steel, and half of it will contain a restaurant which will have a front which can be removed in summer.

More than 1,300 persons of London's population claim the high seas as their birthplace. Of these babies, more girls are born than boys.

Michael Angelo said genius is eternal patience.

Eighty per cent. of the new radios in England were bought on time.

IN UP-TO-DATE STABLES

—Old Reliable Minard's

When horses come in to stable with wounds or saddle sores, or sore shins, or other troubles, the thing to do is get the Minard's Liniment at once. I have found my Minard's Liniment especially good for barbed wire cuts on horses. A family doctor prepared Minard's Liniment over 50 years ago. Still invaluable in every stable and every home.

Liner Gangway Blocked

Passengers At Southampton Held Up By Thousands Of Bees

Thousands of bees held up passengers about to embark on the liner Moldavia at Southampton, England. The bees settled down comfortably at the foot of the passenger gangway and defied attempts to move them. A hose was tried, but this merely incited the bees, and caused them to buzz in clouds, scattering onlookers. Eventually order was restored, and embarkation proceeded.

FASHION FANCIES

A SHEER WOOLEN TO WEAR
RIGHT NOW—SO SIMPLE THAT EVEN AN INEXPERIENCED SEWER CAN MAKE IT

By Ellen Worth

Here's a smart little woolen dress to be thinking about—or maybe to pattern it in a wool-like silk or in velvet.

It's so very jaunty and tailored looking for school, college or the office. Made in rust novelty woolen, this little model, that only simulates a blouse and skirt, will be found very practical.

Easy to make for the two-piece skirt joins the blouse beneath the removable belt.

Style No. 450 is designed for sizes 14, 16, 18 years, 36, 38 and 40-inches bust. Size 16 requires 4 yards of 39-inch material with 2 1/2 yards of bias.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg. Let the new Fall and Winter Fashion Magazine assist you in assembling your family's fall clothes. There are designs for every type and every occasion, and of course one of our perfect-fitting patterns is obtainable for every design illustrated. Don't delay! Send for your copy today!

Transmits Sound And Vision

Television In Germany Covers Distance Of Nearly 50 Miles

A great advance in television service has been achieved by a transmission from Wittenberg to Gildenhall, Germany, a distance of nearly 50 miles. The transmission, both for sound and vision, is stated to have been very good. Dr. M. Hadamowski, head of the German broadcasting service, was seen and heard by the men of the labor camp at Gildenhall, whom he addressed. Afterwards, news pictures were transmitted with results reported to be equally satisfactory.

The catfish gets its name from the cat-like whickers and purring noise it makes when caught.

Problems Of Production Studied Under Prairie Rehabilitation Program

An important and very practical phase of the Prairie Farm Rehabilitation programme centres around the intense studying of the farm problems of production resulting from drought and soil drifting, also around the demonstrating of the most successful precautionary and controlling measures. As a medium for carrying on this work, the Prairie Farm Rehabilitation Act provides for the establishment of District Experiment Sub-Stations. These sub-stations are located in problem areas, principally in the south and central portions of the three Prairie Provinces, where hardships and financial loss have resulted from varying hazards to crops, community wide in their extent. Up to the present time thirty-nine district experiment sub-stations have been established on varying soil types, and an active programme of work has been instituted. As a broad objective the programme aims to develop a system of farming with as high a degree of permanency as may be possible, a system that may be adaptable to farming areas where grain farming is principally being followed, with limited rainfall and on soils subject to drifting.

The system of cropping is based primarily on strip farming with its accompanying necessary cultural practices and short crop rotations. The two year rotation of fallow, wheat alternating has been most widely laid down, although in certain sections where the annual precipitation warrants such a procedure, a three year cropping system of two crops of grain after fallow is being followed. The cereal crop being grown on these short rotations is keeping with the individual need and aims to produce wheat primarily as the cash crop, at the same time to grow oats and other cereals as forage, thus building up feed reserves as an assurance against the possibility of recurring short crop years and the resulting winter feed shortage which is frequently experienced. The width of strips vary from eight to sixteen rows, depending on the soil type and its history with respect to soil drifting or wind erosion. The effect of cover crops and the use of manures and chemical fertilizers is also under experiment and study as to their effect on controlling soil drifting and wind erosion.

The development of farm home shelter belts to protect the farm buildings, farm home and to give shelter to stock around the paddocks, is under way. Definite plans have been made and land summer followed this season as may be required in keeping with the programme to make it possible next spring to set out tree plantations and shelter belts on farms operating as district experiment sub-stations, where they do not now exist, and also to expand the present shelter belts as may be advisable. The farm garden, as a source of supply of vegetables for the family during the summer and winter is being provided for in the layout and is being enclosed in the shelter belt adjoining the buildings. The garden area is being divided into two sections so that each year cropping will take place on summer fallow land. A sufficiently large area is being set aside for this purpose to make the use of horse equipment possible as a labour saving procedure in farm gardening.

To provide adequate pasturage for stock livestock as may be kept, including horses for farm use, a permanent grass paddock adjoining the buildings and protected by a tree shelter comes within the programme of work. In many cases where such do not already exist, land has already been set aside to provide this pasture, using Crested wheat grass or Bromes grass as the foundation when seeding down. As a supplement to the permanent pasture, as the season advances and growth becomes slower, provision is being made for supplementary pastures, and an area is being seeded down to fall rye as well as to spring grain.

In the study of drought and soil drifting problems on sub-stations, very special attention is being given to the methods of handling the summerfallow. These practices being directed to permit a lumpy surface and to retain as large a portion as possible of stubble and other forms of vegetation on the surface.

In the organization of a sub-station, the land is not purchased but rather a co-operative agreement is entered into with a progressive and interested farmer in these different districts. In consideration of an annual rental for land use, this farmer undertakes to provide the necessary labour and equipment to carry out

the work under the direction of a supervisor representing the Dominion Department of Agriculture. To be effective in studying such a problem as that of soil drifting, a fair sized unit is necessary and for such an area up to 640 acres is that utilized in sub-station work. The district experiment sub-station is a community developed organization and aims to study and work with farmers in these districts for their mutual benefit so that sound practices and those most likely to succeed under such conditions may become general in their application.

District Field Days have been held this year on these sub-stations at which time the station operator and representative of the Dominion Department of Agriculture reviewed the work under way and the results being obtained. The extent and direct importance of the problem under consideration has been evident from the group of from 100 to 350 farmers who have assembled to discuss with one another and study their local community problems.

The work in connection with the District Experiment Sub-Stations is being directed by John C. Moyman, chief supervisor of Illustration Stations, Dominion Experimental Farms.

Temperature Should Be Low

Anything Above 68 Degrees Affects Quality Of Eggs

It is a well known fact that egg quality is greatly lowered when exposed to too high temperatures. Damage begins as soon as eggs are held at temperatures above 68 degrees, because germ development begins at that point. While much lower temperatures are desirable, yet when germ development is prevented one of the biggest causes of loss of quality has disappeared.

At the recent poultry conference in Chicago, Prof. E. M. Funk, of the University of Missouri, discussed egg temperatures and methods of cooling eggs, based upon tests which he had made. His statement, in part, follows:

"Warm eggs should be put in containers where they are exposed to cool air. Eggs in a wire basket will cool much sooner than if in a basket or case. They should not be put in cases till they have been exposed to lower temperatures for a period of several hours."

"The use of cooled containers instead of warm containers will assist in the cooling of the eggs. The flats, fillers and cases carry a considerable amount of latent heat, which should be removed before the eggs are cooled."

"The circulating of air in the room will speed the cooling process greatly, especially if the eggs are contained in a wire basket or tray."

Ducks Need Some Shelter

Will Not Thrive If Protection Not Given At Night

There is a fairly common impression that ducks require no shelter. This is quite correct so far as running about during the day is concerned, except in hottest summer; but they never thrive properly without some shelter at night. It need not be elaborate, nor large enough for them all to promenade in it all night. It is unlikely that they will stay in it at a time. They like to be outside, and yet to be able to seek shelter occasionally, and the shelter must be perfectly dry.

Unless the house is made on sloping ground the easiest way to keep it dry is to fill it with six inches of earth and to dig a little drain around it. Put three to six inches of straw on the floor, and the ducks will be warm and dry as soon as they enter. Five feet is high enough, for the pen with three sides perfectly wind-proof, and the fourth partly closed.

Prerogative In Jail

The 1,200 inmates of Canton's first prison, 200 of whom are women, "are better off in the prison than they would be outside working as laborers or than they would be as peasant living on farms." This is the finding of a committee of Chinese newspapers who have investigated the first prison. The committee finds most of the prisoners dislike the idea of freedom.

Bats have their scales inside their skins. Their aliphers are a valuable asset to them in escaping from their enemies, and is due to a highly polished skin which exudes a sticky mucus.

To those Canadian soldiers who remember the Battle of the Marne this picture will have special interest. Here we see a crowd outside the Cathedral of Meaux after the commemoration service which was attended by several hundred ex-service men, who, twenty-one years previous, were suffering the hardships of a strenuous battle.

Radio Pioneer Dead

Was Instrumental In Placing Wireless On Many Ships

Charles Crittenden Galbraith, one of the first men to equip steamships with wireless telegraphy and founder of C. C. Galbraith & Sons, manufacturers of lifeboats, life-saving equipment and marine supplies, died recently in Buffalo. He was 74 years old, and death was due to heart failure after an illness of two years. In 1891 he became interested in wireless telegraphy. He was associated with the De Forest Wireless and the United Wireless Companies, and it was due to his efforts that many steamships on the Atlantic and Pacific Oceans and on the Great Lakes were equipped with wireless.

The skeleton of a giant Irishman, seven feet, seven inches tall, is one of the remarkable specimens in the College of Surgeons, London.

Would Abandon Branch Lines

Make Applications For Closing Lines In Manitoba And B.C.

Applications for leave to abandon two branch lines in Manitoba and one in British Columbia, operated by its subsidiaries, have been filed by representatives of the Great Northern Railway in Winnipeg with the board of railway commissioners.

In Manitoba, the applications seek abandonment of lines running from Brandon to the international boundary and from Morden to the international boundary, operated by the Brandon, Saskatchewan and Hudson Bay Railway.

In British Columbia, leave to abandon the line from Princeton to the international boundary, operated by the Vancouver, Victoria and Eastern Railway, is sought.

Alcohol is now being used in Cuba for cooking and as a motor fuel.

The SNAPSHOT GUILD

IT'S FAIR TIME

Left—"The Country Fair or bust." Right—Even the side-show offers snaphooting opportunities.

Let's forget about the home, the seashore, the woods and pictures of the children and to-day think about picture making opportunities at the county fair.

September is fair time and I'll wager that ninety five of you have ever given any thought to this angle of snaphooting. Right? Honestly the county fair offers more possibilities for snaphooting than space will permit telling about. Can't you see the barker in front of the side-show extolling in husky, loud voices the merits of their shows? There's the side-show band with its battered instruments letting forth loud blasts of discordant music; the not so clean looking vendors of dolls, trick gadgets, balloons and various other things of questionable value; every one of them a subject for good human interest pictures.

But let's look toward the more serious side of the fair—the exhibits, for instance. By making intelligent use of your camera you can take home with you not only pictures of general interest, but you are particularly interested in farm products you can snap record pictures that show later prove invaluable. There is the judging of cattle, sheep, horses and hogs, for instance. If the judging is done in an open-air ring you can snap the picture of the winner of the blue ribbon with any camera—box type or folding.

In taking such pictures, or any picture, as far as that is concerned, don't just look in the finder and snap

the first thing you see. If the animal being judged has any unusual markings manage to get to a place near the ring where these markings show up the best in your finder. Try too to avoid unattractive backgrounds such as telephone poles, wires or sheds.

Among the innumerable picture possibilities at the fair you will surely want to take some action pictures and a fair isn't complete without the thrill of horse racing whether they feature the veteran driver proudly seated in his sulky or the young, dare-devil jockey.

Remember this, however. If you do not have a camera with a very fast shutter, say one that will operate at 1/500 of a second or faster, don't try to snap a rapidly moving object as it whizzes directly across the lens of the camera or direct line of vision. Your chance of getting a good, sharp picture are much greater if you catch your subject at an angle of about 45 degrees. It's always better to play safe than to take a chance and perhaps get a blurred picture. Load your camera with film to-day and be ready for that eventful day when you are "off to the fair".

JOHN VAN GUILDER

Social Hygiene Council Undertakes To Organize Health League Of Canada

Salt In Road Construction

New Type Of Surfacing Is Called Soil Concrete

The speed record of Sir Malcolm Campbell, made on the salt surface of the Bonneville flats in Utah has called attention to the use of salt in road building, and particularly to a search work in this connection by a Canadian in Nova Scotia eight years ago. Roads, embodying principles outlined by A. R. Chambers of New Glasgow, N.S., have been built in the United States and have been found to stand up against the ravages of weather and traffic, despite the inexpensiveness of building costs and maintenance. Roads of this type are also being built in Ontario, particularly in Lambton and Simcoe counties.

Early this year, the United States government announced the appointment of a committee to work under the direction of the Highway Research Board and to study the application of common salt as a stabilizing chemical for use in clay-gravel roads.

Seeking a solution to the dust problem of Nova Scotia's highways, Mr. Chambers constructed short stretches of roadway at Truro and Elmsdale. Mr. Chambers' road-building projects attracted highway experts from the state of Michigan; who, hearing of the Canadian experiment, journeyed to Nova Scotia, inspected the highway built by Chambers and returned home to conduct further research into the value and practicability of all the salt-dust combination. Today, an entirely new type of road surfacing has been developed and is known as soil concrete.

Grasshopper Invasions

Matter Is Discussed At Imperial Entomological Conference

Best methods of dealing with locust and grasshopper invasions was discussed by the fourth Imperial Entomological conference in London.

H. G. Crawford, of the entomological branch of the federal department of agriculture at Ottawa, declared the total area of North America infested with grasshoppers in varying degrees this year was 80,000,000 acres.

The loss last year had been reduced considerably following the campaign in Saskatchewan, the Canadian delegate added.

Dr. A. E. Cameron, of Scotland, suggested the outbreak of the grasshopper plague in Canada might prove a blessing in disguise "since the Dominion has already produced more grain than can be distributed."

Old Age Pensions

Ontario's Average Is Second Lowest Of All The Provinces

The Brookville Recorder and Times says it is interesting to note that the percentage of persons over the age of 70 who are receiving the pensions in Ontario is lower than that in any other province which takes advantage of the Old Age Pension Act, except Prince Edward Island. In the case of Ontario, the percentage is 31.49; in Alberta it is 40.14; British Columbia, 34.57; Manitoba, 47.50; Nova Scotia, 42.57; Prince Edward Island, 23.50; and Saskatchewan, 47.44.

New Army Blimp

United States Machine Pronounced A Success After Tests

The United States Army tested its huge TC14, described as the largest non-rigid airship in the world, and pronounced it "very successful." For two hours the giant blimp, with overall dimensions of 225 by 54 feet and manned by a crew of nine, cruised over Scott Field, Ill., for the benefit of ground observers. The ship is estimated to have an altitude possibility of 10,000 feet. The blimp is powered by three air-cooled engines capable of developing a speed of 90 miles an hour.

Market For Live Stock

Between Aug. 1 and Sept. 5 there were 1,163 head of stock and feeder cattle moved from Edmonton to the Ontario market. The United States market also opened for hogs from the Edmonton area, 489 going to Spokane and 137 to St. Paul, beside 88 cattle to the latter market, in the period given.

According to statistics, single persons do not live as long as married people.

By reason of many suggestions coming from all parts of Canada and because of the ever increasing need of some voluntary organization capable of spreading knowledge regarding preventable illness, the Canadian Social Hygiene Council has undertaken the responsibility of organizing the Health League of Canada.

By this action the officers and directors will be enabled to greatly enlarge the scope and activities of the present organization and make more concrete contributions to the cause of public health and preventive medicine than in the past. It is felt by the National Board and by members generally throughout Canada that this step is in accord with the growing realization of the importance of health as a Dominion and indeed an international issue.

The Health League of Canada will undertake a continuous programme of education in the means of preventing illness and prolonging life and the need for governmental and private action to this end, using the press, the radio, the pamphlet and the public speaker as a means of transmitting reliable information to the public. Widespread support of this new development is already assured by communications from departments of health, educationalists, service clubs, churches and religious leaders throughout Canada.

The Honourable Mr. Justice Riddell, distinguished jurist, member of the Supreme Court of Ontario and internationally known as a writer and speaker, has been president of the Canadian Social Hygiene Council for the fifteen years of its existence. He now becomes president of the new organization.

"The solution of health problems rests in the development of a co-ordinated health programme under Dominion leadership," Dr. Bates says, "and the Health League of Canada proposes to aggressively work toward this end."

It is understood, of course, that leadership means nothing more than the term implies, nor is it advocated that there should be any change in the responsibility or the relationship of the Dominion and Provincial Departments of Health. It is desired at this time only to emphasize the importance of health as a national issue and the desirability of co-operation on the part of all to the effect that ill-health rates may be cut to an absolute minimum.

The Island Of Raasay

Was Once Owned By Follower Of Bonnie Prince Charlie

The suggestion made in the British House of Commons the other day that the Ministry of Agriculture surrender to the Ministry of War the 28-square-mile island of Raasay, one mile northeast of Skye, Scotland, for a British Heligoland, has revived a couple of reminiscences of the forgotten island. Dr. Samuel Johnson and Boswell visited Raasay in 1773. The room and bed in which Johnson slept can still be seen. The travellers had a rough crossing. "This," said Dr. Johnson, safely landed on Raasay with only the loss of his spurs, "is now the Atlantic. If I should tell at a tea table in London that I had crossed the Atlantic in an open boat, how they'd shudder, and what a fool they'd think me to expose myself to such a danger." A McLeod of Raasay, before he followed Prince Charles in 1745, took the precaution of making over the island to his son. After the rebellion he hid in an underground cave. His son, claiming the property, swore that his father was below ground, and that he had walked over him.

Would Become Canadian

Waiting For Consent Of Chinese Government Before B.C. Oriental Can Be Naturalized

Lack of consent of the Chinese minister of interior, understood at Ottawa not to be functioning at the moment, is holding up the importation of application for Canadian naturalization of Cheon Chung, master chef at the British Columbia government house for 18 years.

Chung's application was received by the naturalization branch of the secretary of state department some time ago. Under the law, however, where a Chinese citizen applies for naturalization in this country, consent of the Chinese minister of interior to renouncing of citizenship by the Oriental must be given.

Confucius lived to be about 72 years old, living from 550 to 478 B.C.

SEND FOR THIS GIFT! DIONNE 'QUINTS' BIRTHDAY BOWL

Sent to anyone for 2 Quaker Oats trademarks and 15c to help cover postage and handling charges. Send to The Quaker Oats Co., Saskatoon, Sask.

● This offer is made to celebrate the selection of Quaker Oats as the cereal for the Dionne Quintuplets, even before their first birthday. You will love this souvenir. A beautiful design in lifetime chromium, 6" in diameter, useful for serving many things. Send now to address above.

WORLD HAPPENINGS BRIEFLY TOLD

Convicted from fingerprints on a mirror they had stolen, three middle-aged men were sentenced at Bombay to imprisonment of from one to three years.

Ontario department of education has ordered compulsory teaching of civics in all public and high schools in the province, starting in October. A new text book will be ready soon.

Business is better all over Canada and the morale of the west is improved. Robert O. McCulloch of Galt, Ont., president of the Mutual Life Assurance Company of Canada, said in an interview in Victoria.

A pearl the size of a pigeon's egg and said to be capable of protecting its wearer from all danger was part of the loot recently taken from the tomb of a Manchu prince near Peking by grave robbers.

Lady Byng of Vimy, widow of the former commander of the Canadian Corps, Lord Byng, who died last June, has informed Dominion headquarters of the Canadian Legion she will take part in the Vimy pilgrimage in July next year.

Successful use of an instrument which bores through the brain to the skull pan and burns away tissues producing a fluid that causes hydrocephalus, a condition causing infants to become idiots, is announced by Dr. Tracy J. Putnam, of Boston Children's hospital.

Nearly \$27,000,000 of new ordinary life insurance, a slight increase as compared with the same month last year, was sold in Canada and Newfoundland in August according to returns of the Life Insurance Sales Research Bureau, Toronto. Of the total, sales in Saskatchewan were \$996,000.

England To Receive Relic

Armada Jewel Has Been Given To Art Collection Fund

The Armada jewel, one of the most beautiful relics of Queen Elizabeth's time, is to return to Britain. It was bought at a saleroom in London for 2,700 guineas, and it was announced that it had been given by Lord Wakefield to the National Art Collection Fund. The jewel formed part of the Pierpont Morgan collection of miniatures. It will go to the Victoria and Albert Museum, Kensington, London.

A recent check showed that only 25 of the 1,100 Gideon Bibles placed in one Detroit hotel in 1928 remain in their rooms.

Pain-Relieving

To Shorten Ocean Trip

Irish Free State Plans Ship-to-Shore Flights

London will be brought within three days of New York when civil aviation plans which are being devised by the government of the Irish Free State come into operation—possibly next year.

The scheme aims at a service of high-speed aircraft of the Douglas type, to intercept the big Atlantic liners off the west coast of Ireland and to speed the passengers to London, with the saving of a full day of travel time.

With ships of the type of the Queen Mary and Normandie the Anglo-Irish air ferry will make London and New York a matter of a mere week-end trip.

From Galway on the west coast of Ireland to Southampton by liner is at present a full day's journey, with an additional two hours to London. The new air link would bring Galway within three hours of London.

It is proposed to use amphibian machines.

From Dublin the idea is to form a new air link not only with London but also with Paris, Brussels, and Berlin.

Ships Attract People

Many Feel Personal Loss When Vessel Makes Last Trip

It is not how insubstantial things sometimes attract. They seem almost to have character and personality. A case in point is the famous liner *Mauretania*. "The Old Lady of the Sea," as the vessel was called, has a marvelous record, and those engaged in shipping felt a peculiar attraction to her. When she last sailed from New York on her farewell voyage, the dean of the New York pilots gave up a holiday in order to escort her out of the harbor. Just 28 years ago the same pilot guided the vessel into New York Harbor on her maiden trip, and when she steamed down the Narrows of the Hudson on her last trip he brushed tears from his eyes—A good ship does things like that to men.—Boston Post.

Cosmopolitan Clubs

Formation of A Canadian Federation Takes Place At Convention

Formation of a Canadian Federation of International Cosmopolitan Clubs with constituent clubs at Saskatoon, Winnipeg, Calgary and Vancouver, with Lovell Smith, Saskatoon, as first district governor, was the work of the district convention meeting in Saskatoon.

Jack Bates, Edmonton, was named as district lieutenant-governor; Walter Caswell, Saskatoon, as secretary; Herman Stevens, Calgary, as treasurer; and Jack Colbourne, Edmonton, as sergeant-at-arms.

Delegates were present at the convention from Winnipeg, Edmonton and Calgary. Intimation was received that Vancouver would join the federation.

Hunting King's Fortune

Group Of English Chemists Searching For Gold And Jewels

Search for a legendary fortune of gold and jewels believed to be hidden in a secret passage beneath the ruins of Beeston Castle, Cheshire, England, is being carried on by a group of young North-western chemists and engineers. King Edward II, it is said, had hidden part of his private fortune and jewels in the 366-foot well of the castle before a voyage to Ireland. Some historians say, however, that a great deal of it was seized and used to put Henry IV. on the throne.

Using Eiffel Tower

Georges Mandel, Minister of Posts and Telegraphs, announced that the French government would install a television broadcasting station on the Eiffel Tower. This station will begin operating within six months on a 180-meter wave length. The station will be established in the tower's top-most platform.

Alberta's Coal Reserves

Alberta's coal reserves total 40,200,000,000 tons and lie buried in 1,717 square miles of provincial soil. Sir Montague Bowen, one-man commission investigating coalfields, was told. Dr. J. A. Allan, head of the geology department, University of Alberta, explained Alberta's topography and geological formation.

Teacher—"Tommy, if your father could save a dollar a week for four weeks what would he have?" Tommy—"A radio, a new suit, and a set of furniture."

Soviet scientists are building a telescope which will have the third largest lens in the world. 2118

HARVESTING IN SASKATCHEWAN AT 20 BELOW!

Just about the middle of December, one of the most unique and interesting annual harvests to be garnered on the North American Continent will be in full swing. Not wheat harvest but mineral salts. The scene will be Little Manitou Lake, Watrous, Saskatchewan. The harvesters will be the employees of the Department of Natural Resources of Saskatchewan; and the harvest itself will consist of the tiny crystals of mineral salt which form in Little Manitou Lake each year at "freeze-up." It is one of the essential conditions that the harvest be completed within a period of ten days. When the Prairie winter comes in real earnest, and the thermometer shivers down to 20 below zero, the Departmental men, warmly attired, and wearing waist-high rubber boots, gather up these crystals with specially constructed shovels, and store them in the Government warehouse at Watrous, from where they are later distributed. The medicinal qualities of this saline lake, known for many years, are becoming more and more widely recognized, and as a consequence these harvesting operations are assuming ever-increasing proportions, and the Lake is proving to be one of the Province's most important natural resources.

Munitions Control

United States To Supervise War Implement Industry

The U.S. national munitions control board was set out to formulate rules for the United States government's first attempt to supervise the war implement industry.

At the call of Secretary of State Hull, the board's statutory members—the secretaries of the treasury, war, navy and commerce—will organize to:

1. Register before Nov. 30 all manufacturers and exporters of arms, munitions and implements of war in the country, with their firm name, places of business, and products.
2. Require licenses before any future consignment of munitions can be shipped to foreign nations in peace time.

3. Define what products should be placed in the category of "arms, munitions and implements of war."

4. Make available to President Roosevelt all arms data which may be of use to him in proclaiming an embargo on munitions shipments in the event of hostilities between any nation.

Comes From Many Sources

Canada Supplies Only Part Of Binder Twine Used

The binder twine being used to harvest Canada's grain crop comes from a number of sources. Canadian made twine supplies a large part of the domestic demand and considerable quantities made in the Dominion are exported to other countries, but binder twine from several other countries has come to share the Canadian market. Imports are from Great Britain, Ireland, Holland and recently from Belgium and Germany.

England's Wheat Acreage

A considerable increase in wheat acreage has resulted from the Wheat Act in England and Wales, from 1,288,000 acres in 1932 to 1,660,000 in 1933 and 1,771,000 in the present year. Meanwhile the oat crop has been reduced by 205,000 acres.

One can be a walking "Encyclopaedia Britannica" and yet be the most useless and stupid man on earth.—Sir Charles Grant Robertson.

Courageous Persons

Keeping Up The Morale, And Looking Ahead With Optimism

We have been hearing so much about "sharing the wealth" in the last few months that most of us probably have lost sight of those courageous persons who have been helping to share hard times. Many clergymen, for instance, besides drawing small stipends, have kept up the morale of their parishioners and congregations by looking ahead with optimism.

A Presbyterian minister, who deserves commendation at the moment has accepted a call in the province of Quebec in the knowledge that he is to receive \$450 a year plus "the utmost balance." The balance is to meet the balance. The balance is the difference between \$450 and \$1,600, the larger sum being the rate fixed by the assembly as appropriate to the particular church.

One hesitates to suggest that this preacher is gambling. Rather, he has faith in the Dominion and its citizens. He sees Canada coming back, with the labor market gradually absorbing the present jobless men and women. In the meantime he assumes his duties willingly, ready to make the best of whatever money he may receive. Truly, that is a fine example of Christian fortitude, an inspiration to his fellow men.—Windsor Star.

Grows Huge Grape Vine

German Boy Planted Riding Switch Left By Customer

Thirty-five years ago a Dr. Dick of Diamond Creek, Victoria, was out riding near Heidelberg, Germany. He left his riding switch behind at a smithy's where he was having his pony shod. The smithy's lad recognized the switch as a grape vine cutting. He planted it in his cottage. Now it has grown to a full vine 35 yards long extending over the fence across a line and along the eastern wall of a hotel.

Seek Publicity

A resolution urging the Dominion government to make an appropriation of \$100,000 for publicity in the Canadian newspapers to promote the domestic consumption of fish, was unanimously approved at Montreal at the one-day convention of the Canadian Fisheries Association.

SUNDAY SCHOOL LESSON

OCTOBER 13

THE STORY OF JEREMIAH

Golden text: To whomsoever I shall send thee thou shalt go, and whatsoever I shall command thee thou shalt speak. Jeremiah 1:7.
Lesson: Jeremiah 1:1-10; 6:10, 11; 8:18; 26:1-24; Chapters 36, 37, 38.
Devotional Reading: Psalm 26:1-7.

Explanations And Comments

Courageous Speaking Enjoined, Jeremiah 1:8-10. In the thirteenth year of Josiah's reign (about 626 B.C.), Jeremiah, the son of a priest, became conscious of a divine call to the prophetic office. It is natural to understand that he had long meditated upon his country's sins and had felt impelled to denounce them, but was most reluctant to undertake the task. The inward struggle which took place in his sensitive and shrinking heart when something different from his ordinary consciousness made him certain that he was destined to be the prophet of woes, is told in the form of a dialogue between God and himself.

"Ah, Lord Jehovah! behold I know not how to speak; for I am a child," He was not a child in years but he lacked experience, he feared he had not the ability to speak, he distrusted himself. In the jargon of to-day, he had an inferiority complex. "Say not, I am a child" was the answer to his troubled thoughts that came to him; "for to whomsoever I shall send thee thou shalt go, and whatsoever I shall command thee thou shalt speak. Be not afraid because of them; for I am with thee to deliver thee."

The commission which Jeremiah received was to be "over the nations and over the kingdoms, to pluck up and to break down, and to destroy and to overthrow, to build and to plant." His task was to be destructive and constructive. He must strive to make the people give up their vices and weaknesses which were making for internal corruption and for political destruction, and to implant in their hearts new ideals of righteousness.

The Courageous Speaker Threatened, Jeremiah 20:1-11. During the 40 years of Jeremiah's ministry, his was the task of setting himself in opposition to all the currents of his time for Judah believed that she would escape the impending doom, that Jerusalem was inviolable because it held the temple, that the nation could not perish. Jeremiah had to warn her that her only possible course was to surrender to Babylon. At some great feast, doubtless when the people were gathered at Jerusalem, Jeremiah uttered the warning recorded in the first seven verses of chapter 26.

The Courageous Confrontation, Jeremiah 26:12-15. Jeremiah's defense was that his message had come to him from God, and that he must then amend their ways and doings, and to obey the voice of Jehovah. If they would not listen, Jeremiah would avert the evil which he had pronounced upon them. Prophecy, then, was regarded as conditional—a change of conduct could prevent the threatened punishment.

Busy Year For Sun

More Eclipses In 1935 Than For Past 130 Years

The sun this year presents its greatest show of eclipses for the past 130 years. The moon will have passed between the sun and the earth no fewer than five times, and the moon will be in the earth's shadow twice. This according to Professor Alfred H. Joy, secretary of the Mount Wilson Observatory, is the greatest number of eclipses possible in one year. Not since 1805 have the sun's rays been so often, stated the astronomer, obscured so often, stated the astronomer, correspondent in Pasadena. It will be only the second time since 1255 that there have been five solar eclipses in one year, and there will not be another such number until the year 2485.

Making Ten-Year Tour

Bicyclists From Sumatra Do Not Believe In Speed

Two Sumatran bicyclists who do not believe in the modern craze for speed have arrived at Bombay on a ten-year tour of the world. They started from their home in Sumatra in July, 1931, and have taken over three-and-a-half years to complete 5,000 miles on their bicycles. They made fairly long stops in Indo-China, Siam and Burma and in various parts of India in order to learn the language and study the people and their religion.

Out Of Politics

Henry Ford said in an interview published in The Detroit News that he is not interested in any "Ford for president" boom, or in politics generally. Discouraging the business outlook, the motor magnate said: "I am not a prophet but I have the feeling that business and wage trends will be up, and I do not believe the political campaign of next year will have any appreciable effect on business, one way or the other."

By 1935, the United States public debt is expected to total \$34,250,000,000; approximately \$270 for every man, woman and child in the country.

D. E. Warford, of Sawtelle, Calif., lays claim to be the most tattooed man in America.

ROYAL YEAST CAKES

give you perfect breads, rolls, coffee cake and buns...

Raisin Bread and Buns given tempting variety in our House Raisin Royal Yeast Cake Book for recipe.

The whole family will like these tender Yeast Cakes. Recipe on page 12, in Royal Yeast Cake Book.

It's easy to make this delicious Coffee Cake. Recipe on page 12, Royal Yeast Cake Book.

TIGHT, tasty bread is largely a matter of perfect leavening. That's why it is so important to use dependable yeast. With Royal Yeast Cakes you can be sure of full leavening power every time. Each Royal Yeast Cake is protected by a special airtight wrapper. They keep in perfect condition for months.

Old French Colony

Homo Rule Is Proposed For St. Pierre and Miquelon

After almost three centuries of rule from across the sea, self-government has been offered St. Pierre and Miquelon, small island colony off the coast of Newfoundland and last remnant of France's great colonial empire in North America. Government by elected representatives rather than a governor appointed by France is proposed by the home administration. Acceptance or rejection of the plan is to vote the island's 5,000 people themselves.

A Dog's Day

You have heard people say they "worked like a dog" all day. This is literally true the 24 hours would be spent thus, according to Tavistock, Ont., Gazette: One hour digging out a rat, two hours gnawing a bone, one hour waiting for a cat to come down out of the tree, half an hour begging to get into the house, and the rest of the time sleeping on a mat in front of the door.

Fifty-five miles of streets in the famous borough of Westminster in London are still lighted by gas.

Household Arts

PATTERN 5439

Even though you have nothing on hand but tiny scraps of wool, you can fashion this lovely Afghan. And the wool may be of different weights. Each block—4½ inches square—can be done in different colors. And what a jeweled effect you have when done! It does indeed look like a colorful oriental tapestry. Doing each block in different colors, too, makes the work more fascinating for each is an adventure. Besides an Afghan you can make lovely pillow tops or chair seats. Can't you see what a lovely and inexpensive Xmas gift these would be?

In pattern 5439 you will find complete instructions for making the Afghan shown as well as pillow tops and chair seats: an illustration of the block and of the stitches needed.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. W., Winnipeg.

LEAGUE AGAIN WARNS ITALY IN AGGRESSION PLAN

Geneva.—The council of the League of Nations solemnly warned Italy and Ethiopia against war.

At the same time it constituted itself into a committee to draft a report with recommendations for settlement of the East African conflict and to consider if "anything further can be done to safeguard peace."

Should either country start hostilities before December 4, the league indirectly warned, it will be considered to have committed an act of war against all league members. This would automatically call for punitive steps.

This came as the council, by a unanimous vote, from which the Italian delegates refrained, decided to proceed under article XV of the covenant. It ruled this article was in operation as from September 4.

London.—The deadlock between Premier Mussolini and the League of Nations must come within the next 10 days, it was predicted in some official quarters, the break coming with Italy's resignation from the league and the simultaneous push of its armies into Ethiopia.

Despite the League of Nations' actions in placing the Italo-Ethiopian deliberations under article XV, of the league covenant, official British saw no hope that Duce would hold his East African legions in check until December.

Article XV calls for council recommendations. Should article XV, and its accompanying recommendations be disregarded by a member nation—such as the advance of Italy's troops before Dec. 4—Article XVII—describing such disregard as an act of war—is automatically invoked.

Other foreign officials clung to the hope that Mussolini will finally be overruled by the gravity of his East African adventure and make some olive-branch gesture to the league at the last minute.

Rustless Wheat

Manitoba Said To Be Purchasing Seed From Minnesota

Minneapolis.—Rustless wheat grown from seed developed at the University of Minnesota on the Canadian farm of Hans Liljeord has found a ready market this fall in the government of Manitoba itself.

Liljeord, who operates a 230-acre farm near Arnaud, Man., planted the acreage to Thatcher wheat—developed after years of research by Dr. H. K. Hayes, University of Minnesota agronomist.

In the midst of vast fields of wheat shrivelled by the black stem rust, Liljeord's wheat escaped from disease almost completely and yielded more than 30 bushels to the acre.

The government of the province authorized purchase of 5,000 bushels to be used as seed.

Sentry Killed By Lions

Five Belonging To Emperor Selassie Make Dash For Freedom

Addis Ababa.—Five of Emperor Haile Selassie's big lions escaped, killed one sentry, and injured five more.

In this rush for freedom they devoured several of the Emperor's pedigreed Australian sheep and killed two horses.

Colonel Mekuria, the commander of the imperial guard, seized a machine gun and shot all five beasts in succession.

Gordon Bennett Trophy

Warsaw.—The Polish balloon Polonia was awarded the Gordon Bennett trophy as the winner of the 27th Bennett international races that began here Sep. 15. The Polonia, one of the 13 entries, travelled about 1,607 miles after a flight of 58 hours and 54 minutes. It was officially announced. It reached an altitude of 16,732 feet. Another Polish balloon, the Warsaw, was second.

More Wheat In Store

Ottawa.—The Dominion bureau of statistics reported Canadian wheat in store for the week ended Sept. 20 amounted to 20,862,570 bushels, an increase of 13,958,380 over the previous week. The visible supply for the corresponding week last year was 223,669,206 bushels.

Building Aeroplanes

London.—The Yugoslav government awarded contracts for aeroplane motors to a British firm amounting to £250,000 (about \$1,462,000).

A Quiet Session

Prince Edward Island's House of Assembly Meets

Charlottetown.—Another chapter was written into the history of British parliamentary procedure when Prince Edward Island's House of Assembly, filled with 20 Liberal members, met and carried on the affairs of state without an official opposition. It was not a house of "yes-men," however. At least two government supporters served notice on Premier Walter Lea that they were not going to be a rubber-stamp for cabinet-directed policies.

When the money bill, the most important legislation of the special one-day session, was being studied in committee under the guidance of the premier, W. H. Dennis, Prince, and H. H. Cox, King's, raised objection to Canada's smallest province providing for \$3,000,000 expenditure to refund loans and carry on public works. To give the cabinet time to study the bill, months after taking office would be going directly against the policy of retrenchment which placed them in power, the critics contended.

Absence of an official opposing party helped to speed the work of the session and at an early hour the governor, accompanied by his secretary and aide-de-camp, returned to give His Majesty's assent to the bills passed.

The house was prorogued to meet ordinarily in March, 1936.

New Gold Strike

Made On North Arm Of Great Slave Lake

Edmonton.—A new gold strike west of Yellowknife bay on the north arm of Great Slave lake was revealed to the world when Dr. Fred Jolliffe, of the federal geological survey, flew out of the north after a summer spent in the northwest territories.

"The strike was made September 15 several miles from the Burwash discovery," said Dr. Jolliffe.

He refused to divulge the name of the prospector who made the strike pending the filing of his official report when he returns to department of mines headquarters at Ottawa.

Dr. Jolliffe and his party of 15 student assistants from the University of Alberta, explored an area of roughly 10,000 square miles on the north shore of Great Slave lake and found that 2,900 square miles of the district was underlain by pre-Cambrian sediments and volcanics, relatively favorable for the occurrence of gold and silver deposits.

Dr. Jolliffe left Sept. 24 for Ottawa.

Stage Sham Air Raid

Fleet Of Giant Bombers Visit Island Of Malta

Valetta, Malta.—A fleet of giant bombers and other aircraft dived over Malta in a sham air raid recently, with this tiny British island outpost plunged in darkness and eerie silence.

Promptly at 9:30 p.m., every house, street and light blinked out. Simultaneously, the twinkling lights of British warships riding at anchor in the harbor went off.

Thousands of citizens thronged the historic bastions of Valetta and the seaford during the raid.

Acting-Governor Luck surveyed the operations. Aerial and military authorities said they were well pleased with the island's loyal co-operation.

Would Defend Record

If Speed Prestige Threatened Campbell Will Race Again

London.—Sir Malcolm Campbell and his Bluebird are through with breaking records unless some foreigner gives them a new mark to shoot at.

Sir Malcolm announced at a dinner in his honor that he had had his fill of blistering speeds, but that there was still a great deal of lightning in his racing car that might be coaxed out if Britain's speed prestige was threatened.

Coining Ethiopian Money

Rome.—Italy is already coining Ethiopian thalers, for use following the incursion of Italian forces into Ethiopia. Employees of the mint said the coins are to be used by the military and civil governors while Italy plans to install in Ethiopia, to pay off tribesmen who seek work under Italian domination.

Another Leaf Competition

Montreal.—Third annual competition for the most beautiful autumn tinted maple leaf is announced by the Canadian government through the Canadian travel bureau. First prize will be \$100.

Honesty Was Rewarded

Delivery Boy Returns Valuable Bonds And Gets Good Job

New York.—From the lowly plane of delivery boy of "coffee and—?" at \$3.15 a week, young Albert Corvetti vaulted to a remunerative position in Wall street.

Corvetti's role in "the street's" newest success story was cast when he picked from the gutter a packet of bonds valued at \$150,000 and returned them to the owners. C. F. Grundwald, vice-president of C. F. Childs and Co., Wall street brokers, owners of the bonds, announced Corvetti would start work in the cashier's department of the brokerage firm.

Corvetti, who is 22, may also get a reward.

Insurance Premiums Higher

British Vessels Passing Through Suez Canal Must Pay More

Singapore.—Fear of trouble developing in the Mediterranean was reflected here when marine insurance companies warned special premiums for "war risks" must be paid by British vessels returning to England through the Suez canal.

To escape payment of the war risk premiums British ships must go all the way around the Cape of Good Hope.

URGE LARGE SCALE EMIGRATION PLAN TO THE DOMINIONS

Newcastle-On-Tyne, England.—The conference on emigration to the empire concluded after preparing a written case for a government-assisted emigration scheme.

The brief, which a deputation will present to the government, urges a large-scale emigration scheme would help solve unemployment at home and abroad. Financial assistance would be repaid by saving unemployment relief.

Establishment of an empire development and emigration board with statutory powers is advocated and it is suggested the annual budget should provide grants to settlers.

The plan will be submitted to the cabinet by the lord mayor of Newcastle, R. S. Dalgleish, and a deputation of members of parliament and representatives of emigration authorities from all parts of the country. Copies of the statement afterward will be circulated to Dominion premiers, high commissioners and agents-general, with a letter from the lord mayor of Newcastle appealing for their co-operation in an effort to bring about the biggest move ever made for the repopulation of the empire by families and communities from the United Kingdom.

Siege Of Lucknow

Ten People Alive To Celebrate Thrilling Event

London.—Ten people in different parts of the world celebrate one of the most thrilling incidents in the modern history of the British Empire, the siege of Lucknow in the Indian mutiny.

The oldest survivor of the siege is C. G. Palmer, a resident of British Columbia; the youngest Arthur Dashwood, 78, living in London. Dashwood's mother gave him birth in the residency at Lucknow, where 17 people were herded in one room during the siege. Despite her ordeal, Mrs. Dashwood lived for more than 70 years.

RECEIVING THE KING'S CUP

Pilot T. Rose, driving a Miles Falcon machine, won the King's Cup Air Race "round the British Isles" this year, and is shown receiving the coveted trophy from the hands of S. P. Cunliffe-Lister.

FILIPINO PRESIDENT

By an overwhelming majority, Senator Manuel Quezon, above, was elected first President of the new Philippine Commonwealth. Vice-President Garner, of the United States, will attend the inauguration exercises on November 15, when Quezon will take office for six years.

Mussolini Opposed

Report From Italy Of Some Opposition To War Plans

Paris.—French newspapers reprinted a story from The London Referee saying Prince Umberto, heir to the Italian throne, is opposed to Premier Benito Mussolini's conflict with Ethiopia.

This report was described as utterly false in Rome and London by authoritative Italian spokesmen.

There is a possibility, the story said of General Italo Balbo, governor of Libya and Italian air hero, leading a revolt against Duce.

"Balbo, whose relations with the royal family are excellent, is also opposed to the Ethiopian campaign," the story asserted. "A large number of Italian superior officers share his view."

Farewell Banquet

Governor-General And Countess Of Beesborough Are Honored

Ottawa.—A farewell banquet was given by the government of Canada to the Governor-General and Countess of Beesborough.

The term of office of the Earl of Beesborough as the king's representative in Canada expires shortly.

It was an affectionate farewell at which, in addition to Sir George Perley, who presided, there was a distinguished gathering of representatives of the state, the diplomatic corps, the church, the judiciary and the civil service with their wives.

Responding to the toast proposed by Sir George Perley, the governor-general dwelt on the happy relations he had enjoyed during his four years in Canada.

Hours Of Labor Set

Legislation Will Be Brought Into Effect October 5

Ottawa.—Legislation for limitation of the hours of labor in certain industrial undertakings in Canada will be brought into effect on Oct. 5. Regulations for the carrying out of the measure have been drafted.

Based on a 1919 convention of the League of Nations, the legislation constitutes part of the reform program brought down by the government at the last session of parliament.

Abolish Ration System

New Decree Is Effective In Soviet Russia

Moscow.—A government decree abolished the ration system of selling some prime food products, cutting prices in open commercial shops.

The decree constitutes an important step toward liquidation of the present double price system whereby workers make purchases in "closed" ration shops and the general public buys in open shops.

Prices of the two have differed widely, workers getting the benefit of extremely low rates.

The decree abolished ration shop sale of meat, sugar, fish, butter and potatoes and threw all buying of these products into open shops, substituting one fixed price for the previous double price system.

The new price scale reduced beef more than 50 per cent. It now will sell from five rubles up per kilogram. Sugar will be four rubles and 52 kopecks per kilogram as compared with 4.50, and butter was reduced from 24 rubles per kilogram to 15.

To prevent speculation, it was announced, no purchaser will be permitted to buy at one time more than two kilograms of meat; two of sugar; a half kilogram of butter or three kilograms of fish.

Veregin Resigns

No Longer Head Of Brotherhood Of Doukhobors

Saskatoon.—Peter Veregin, for 10 years president of the Christian Community of the Universal Brotherhood of Doukhobors in Canada, stated here that he had severed all connection with the community. He declared that he stood now as a private Canadian citizen. He had no intention of leaving the country, he said.

Mr. Veregin, who has been virtual ruler of the sect in Canada since the death of his father in a British Columbia railway accident, said he had tendered his resignation about six months ago. He would not disclose any reason for his action. He is now on his way to Montreal.

TO STRENGTHEN NAVY AND AIR FORCE IN BRITAIN

London.—Prime Minister Baldwin intends to outline measures to strengthen both the navy and the air force when he addresses the Conservative party at its annual conference at Bournemouth.

George Lansbury, Labor leader in the House of Commons in an address declared Britain and other nations were on the brink of a war in which it would be "Christian against Christian, Mohammedan against Mohammedan, Jew against Jew—all praying to the same God for Victory."

"I cannot bow to that sort of thing," the leader said. "The way out is for some nation, and I want it to be Britain, to blaze a new trail."

Athena.—The semi-official Athens news agency announced information from a German source indicated arrangements had been completed at Istanbul for Greek and Turkish warships and planes to start manoeuvres in the Dardanelles and that two Roumanian torpedo boats would also participate.

It has been reported Greece is prepared to support Great Britain in any Mediterranean activity which might become necessary at the outbreak of Italo-Ethiopian warfare.

Greek newspapers hailed the arrival of British ships in Greek ports, saying that the people of Greece have come to regard the annual British naval manoeuvres in Mediterranean waters as a welcome tradition.

The Federal Vote

Results Should Be Quickly Available After Closing Of Polls

Ottawa.—Although various adaptations of proportional representation and the single transferable vote are used in some provincial elections the Dominion general election Oct. 14 will be conducted on the traditional single-vote system.

Electors will have only one choice between the contending candidates. They will mark an "X" opposite the name of the candidate they favor and the candidate with the largest number of "X's" will be elected. There are no second or third choices.

With the single-vote system in operation throughout the Dominion on election day results will be available probably for all constituencies within a few hours of the closing of the polls.

OTTAWA SAYS FAREWELL TO BESSBOROUGH

Ottawa.—To the strains of "Auld Lang Syne" and the last goodbyes of thousands of Ottawa's citizens ringing in their ears, the Governor-General and Lady Beesborough departed for England.

Standing on the rear platform of their railway car as it drew out at funeral pace from the Union station, Their Excellencies and their Canadian-born son, the Hon. George St. Lawrence Neufville Ponsonby, waved to the assembled multitude. The governor-general was obviously stirred by a deep emotion. His eyes glistened with tears.

In the early afternoon a large crowd began to assemble in the vicinity of the station. It was a dull grey day, with overcast skies, sultry and humid. This contrasted with the brilliant sunshine which had greeted Lord and Lady Beesborough when they arrived in Ottawa to take up their quarters four and a half years ago. But all the glitter and pomp which such an official occasion evokes in the capital were present on this occasion as they were then.

Within, red carpets stretched from the stairway to the waiting special train, the pathway ending in a platform up to which was backed the car which was to take Their Excellencies to Quebec. Gathered along each side were figures in Ottawa's social life, diplomats, soldiers, naval men and air force officers.

Market Zones For Coal

Says Plan Would Result In Increased Output

Drumheller, Alta.—The Villiers national coal policy, which would divide Canada into three market zones, was advocated here by Jesse Gouge, pioneer Drumheller valley coal operator, at a hearing of the Alberta coal commission.

Mr. Gouge told Sir Montague Barlow, English business expert heading the commission, that under the policy importers of coal would be licensed by the Dominion government and free importation would be permitted into the central zone, Ontario, but would limit eastern and western areas.

Adoption of the Villiers scheme would do away with the present subsidies on domestic and steam coals. Mr. Gouge contended the advantage to the mines from this policy would be 10 times greater than that which would accrue from the subvention on coal to Ontario, he continued. Subventions are paid by the Dominion government.

At present 30,000 tons are shipped annually to Ontario, the Drumheller operator said, while the market zoning plan would mean from 250,000 to 500,000 additional output each year from the tonnage mined and more than that from the steam mines of Alberta.

Would Ban Canadian Hay

English Farmers Contend They Produce Enough To Meet Demand

Alton, Hampshire, Eng.—A resolution calling for the prohibition of hay imports from the dominions and foreign countries was passed at a grievance meeting of farmers here.

It was contended sufficient hay was produced in Great Britain to meet home demands.

Speakers emphasized the "galling" effect on farmers when they saw their land being used for army manoeuvres and army horses being fed Canadian hay. It was declared five camps were being supplied with Canadian hay, amounting to 1,500 tons, while only one camp sought tenders from local farmers.

Canadian average hay exports to England over a period of years run from 15,000 to 20,000 tons annually.

Favorable To Canada

Winnipeg.—As a result of the 1931 trade agreements, the trade balance between Canada and Australia is now three to one in Canada's favor. L. R. MacGregor, Australian trade commissioner in Canada, stated here Australia is Canada's third best world market, he said.

Installing McGill Principal

Montreal.—It is expected at least 24 Canadian universities and colleges will be represented at the installation of Professor H. E. Morgan as principal of McGill University Oct. 5. Dr. Robert C. Wallace, president of University of Alberta, Edmonton, will be in attendance.

A Scientific Discovery

Sounds That Cannot Be Heard Affect Living Organisms

We are all familiar with the effects produced by audible sound, but scientists are discovering how sound waves beyond those we can hear affect living organisms. For the average adult, when air is made to vibrate between 30 and 20,000 times per second, the result is interpreted as sound, but as the vibrations become more rapid, the sound gradually increases in pitch and finally becomes inaudible. When this point is reached, entirely new properties become apparent in the sound waves, one important difference being that they now possess considerably more energy than before.

This fact was noted some time ago at the Naval Laboratories at Toulon, where Professor Langevin showed that high-frequency vibrations could produce paralysis in fish. Professor Langevin is a well-known authority on ultra-sonic waves, as these high-frequency vibrations are called, and has carried out much valuable research work in discovering how to make use of these waves in signalling and telephoning under water.

Further investigations were carried out in the United States, and the first tangible results are reported in the work of three French scientists, MM. F. Bianchi, H. Bianchi, and A. Dognon. These investigators found that when certain insects were subjected to high-frequency sound waves, of the order of 25,000 vibrations per second, the insects showed a marked state of activity, which lasted only so long as the waves persisted.

If the treatment was continued for several minutes with stronger waves, the insect first became inert and then died. Frogs treated in this way were carefully examined after death, and the muscular tissues were found to be badly torn and muffled without any other injury being apparent.

It would seem that these vibrations have an extremely powerful effect on living bodies, and might be put to excellent use in certain branches of therapeutic treatment. But a great amount of purely scientific research work must be carried out before any probable curative properties can be discovered and applied.

Funnels Are Disappearing

Ocean Liner Of Future Will Not Have Any

When oil was substituted for coal as the fuel for great ocean liners, many people pointed out that a wide expanse of smokestacks was essential, a nice oil, properly fired, is smokeless. Nevertheless, marine architects have continued to furnish oil-burners with smokestacks, on the theory that the travelling public demands them. To the voyager, they claim, a ship without smokestacks looks funny.

But some use had to be made of the space inside the smokestacks, and it has been absorbed for various purposes, from the storing of baggage to kennels for dogs. It is now announced that the new luxury liner Orion, which is to be put into service between England and Australia, has only one funnel despite its size; it is going to advertise smokestack space instead of smokestacks. The funnel is for ventilating purposes.

It took a little time for the dashboard and whip-rocker to disappear from the early motor car, which, in the opinion of the first designers, had to look as much like a buggy as possible. Eventually the ocean liner without funnels will become such a customary sight that four-funnel ships like the Mauretania will look mid-Victorian.—Detroit News.

Problem Of Glutted Markets

Canada Supports Inquiry Before League Of Nations

Canada warmly supported the Australian proposal for an inquiry by the League of Nations into the problem of glutted markets and simultaneous deficiency of food in certain countries. The proposal was backed by Britain on its appearance. J. H. Woods, of Calgary, head of the Canadian delegation to the league assembly, expressed keen appreciation in the technical committee of the assembly of the manner in which the proposal was submitted by Stanley Bruce, of Australia.

Clear Enough

A colored gentleman who conducts a cartage business in a small way, presented to a new customer a bill for \$3.

The customer, who is a bit of a wag, said: "Stephen, you'll have to give me an itemized account I won't pay this until you do." Stephen retired in obvious confusion. Next day he was back again with a bill reading:

To three comers and three goes at 50 cents a went....\$3.

KING'S THIRD SON TO WED SCOTTISH PEER'S DAUGHTER

The King and Queen have announced the engagement of their son, the Duke of Gloucester, and Lady Alice, daughter of the Duke of Buccleuch and Queensberry. The Duke is the third son of Their Majesties, and when he weds only the Prince of Wales, of the four sons, will remain a bachelor. Lady Alice is 33 years old and very popular in the Mother Country. Above are pictures of the happy couple.

Old Georgian House

Historic Building Is Donated To Town Of Port Qu'Appelle

There still stands at Port Qu'Appelle, Sask., amidst a background of trees overlooking Echo lake, a wing of the old Georgian house known as "The Fort." This little building was a portion of the house occupied by the officer in charge, the late Archibald McDonald.

Before his retirement from the Hudson's Bay Company, Mr. McDonald purchased the original site, and later built in the adjacent grounds the home where his many friends were always welcome.

This historical relic has now been donated by his daughter, Miss Norah McDonald, resident at Vancouver, to the town of Port Qu'Appelle. This is to be restored and equipped with such old furniture as is available much after the fashion of the Chateau de Ramsay at Montreal.

Among other items of historical interest it will contain the original desk at which General Middleton wrote his despatches during the rebellion of 1885, while this was his headquarters.

This little building has attracted the attention of many tourists in the past, seeking places of interest, and the townspeople feel indebted to Miss McDonald for her gift, and hope that the restoration of the same may be accomplished without delay.

The Wrong Policy

National Prosperity Impossible On Basis Of National Interests Alone

By proofs that have staggered humanity, a policy of national self-regard spells suicide. And yet all the nations, without exception, are acting in the teeth of this peremptory word of God, and preaching and practicing "economic nationalism." Let it be granted that nationality is a precious possession, and that "economic nationalism" may be a necessary phase in the development of freer and friendlier relationships. It remains true, however, that all attempts to achieve national prosperity on a basis of national interests alone—however subtle and ingenious the means employed may be—are so much ploughing the sand and beating the air. There is more sound political economy in the Golden Rule than in all the economic theories ever framed.—John Buchan.

Doctor Was Wise

Unique wisdom was displayed by a doctor who unable to understand directions given him, and wishing to visit a cottage near Bracknell, Berks, England, addressed a sixpenny telegram to the cottage and then accompanied the messenger.

Indifferent Golfer (in a very remote rough): "What the blazes do you want to keep consulting that infernal watch for?" Caddie (scurry): "Taint a watch, mister, it's a compass!"

There are 32 so-called chief diseases; 14 of these could be wiped out entirely if existing medical knowledge concerning them were fully utilized.

That more than 120,000 trains run in a recent month averaged only 1.1 minutes late, is the boast of a railway in England. 2118

Danger Of Polluted Water

Poultry Yard Should Be Well Drained If Possible

Nothing is much more dangerous to poultry than polluted water. Nearly every common disease and parasite that attacks poultry can be transmitted very readily through the drinking of surface water. Preventing the drinking of surface water by the flock is an important step in preventing disease. Just how to do this is a difficult problem to solve. Fortunately, indeed, is the flock owner who has a soil so open and sandy that water never stands on the lot, inviting the chickens to drink.

Also fortunate in wet seasons is the one with his poultry houses and sheds situated on distinctly sloping ground. Often such slopes seem a tremendous handicap, but in prolonging of wet weather they are sure to be appreciated.

But even on rolling land there are holes, wagon ruts, animal footprints and such, that can hold plenty of water to introduce everything from fowl typhoid to worms and coccidiosis.

On lands which are practically level, there is no alternative but the use of spade and hoe, or even the plough, scraper and grader to make the yards safe for poultry.

Of course, the systematic working of the level yards into high strips separated by drainways is the ideal plan. If this can be supplemented by the use of gravel in the more used portions of the yard, the danger of disease transmission through surface water will be greatly reduced.

Grows At High Altitude

The highest elevation at which a plant has been found is 19,000 feet, on Mount Everest. This plant is called Crucifer and has a pale pink flower. It had been thought that lichens and mosses would ascend to higher elevations than flowering plants, but the lichens are not found above 17,500 feet.

Customer—You know that music stool you sold me.

Shopkeeper—Yes.

Customer—Well, I've twisted and turned it in all directions but I can't get a single note out of it.

Lamb Feeding Plan

Western Sheep Raisers Can Send Lambs To Be Fattened In East

The department of agriculture gave notice it had brought into effect for the third successive year its lamb feeding project under which western sheep raisers send lambs east to be fattened during the winter.

Officials of the Dominion livestock branch field service, an announcement, are now locating farmers in eastern Canada who have ample shed accommodation, plenty of feed and water, who wish to fatten lambs.

Under the project farmers approved as lamb feeders are not required to lay out cash. Freight charges to feedlots are prepaid by the department of agriculture, reimbursement being made from proceeds of sale after lambs have been fattened and marketed. Ranchers retain ownership of the lambs until they are marketed.

A valuation of \$3.75 per hundredweight is placed on the lambs at Moose Jaw stockyards where official weights are established. The feeder receives the value of all the grain in feed, plus 60 per cent of the spread, after freight and marketing charges have been deducted. The rancher receives \$3.75 per hundredweight, Moose Jaw weights, plus 40 per cent of the spread.

Prepares For Flight

Sir Charles Kingsford-Smith To Fly To Australia

Sir Charles Kingsford-Smith sailed on the liner Britannic recently for England to attempt what he described as "the last long flight I hope to do."

His plane, "Lady Southern Cross," was shipped out on a cargo vessel. It will be assembled in England. Sir Charles will shortly thereafter set out on a flight from London to Melbourne, by way of Athens, Bagdad and Singapore. The Australian aviator said he was organizing a company to fly this route commercially.

Snow creaks when it is too cold to melt under pressure of footsteps, and the dry crystals slip over one another.

"AN OUNCE OF PREVENTION"

—Cassell in the Brooklyn Daily Eagle.

Superstitions Of The East

Many Trivial Things Are Considered Unlucky In India

"Your baby is the ugliest I have ever seen—he's so skinny, undernourished and altogether hideous..." Say that to the mother of a bonny English baby and she will probably hit you over the head with a saucer. But say that to an Indian mother and she will smile. You could have said nothing to please her more, writes a correspondent in the London Daily Mirror.

It is very unlucky, Indian women think, to praise a child. Such compliments make the gods jealous, and they may visit some terrible revenge upon the baby.

So, if you want to please an Eastern mother you think up uncomplimentary remarks—and the ruder you are about the baby, the more popular you will be with the mother!

And another thing—you will never find an Indian woman speaking adoringly of her baby, or thinking of grandiose names to call him. Such a sounding name as Rex or Julius are unknown. The more a mother loves her child, the harder she will work to discover a name which will belittle her offspring. For instance, Parthina is a popular name for little boys, while Rubina or Tagend (Dumaria) are great favorites for little girls!

An Indian housewife must burn ten pounds of butter every time an owl alights on her roof. This is a most unlucky omen, and the only way to stave off bad luck is by destroying precious household produce.

Before undertaking a journey—no matter how short—an Indian family always consults an astrologer to discover the best time to leave home. If the seer says that eight in the morning is the luckiest hour, then at eight in the morning the family must leave—whether their train goes at mid-day or ten at night. Near many railway stations in India there is a special camping ground where families spend the day waiting for their train after inconvenient forecasts.

As for introducing your husband and stating his name—an East-Indian woman would rather die than do so. Never in all her life does an Indian girl speak her husband's name aloud, for it brings the worst of luck. When referring to him she says "The father of my children," or she calls him simply "that man" or "my man."

Childless wives—here's one for you. If any of you have a sister who has a baby, you wouldn't be allowed to fondle it in India. This is the reason. In the East women believe that childless wives are the cause of those who have babies and if a child is touched by such a woman a spell is cast on him.

If an Indian mother discovers a childless woman touching her baby she will immediately take the child away, wash it from head to foot, and put a "tickle" mark on its forehead (this is a spot of red which wards off evil).

There are many Eastern superstitions connected with the moon too. An Indian girl must see the moon's reflection first in a bucket of water if she wishes to ward off bad luck.

Has Novel Business

New York Woman Opens Drug Store For Cats

Pioneer in a new field for women—or anyone else for that matter—Miss Doris Bryant operates a drug store for New York cats, believed to be the only establishment of its kind in the world to-day.

Modern cats, says Pharmacist Bryant, have gonevernesses, specialists to attend them when they are ill, and their own private materia medica. That is when they are ailing, prescriptions are written especially for them and filed just as for ailing humans.

Such cats as those belonging to well-known actresses; Sophie Kerr, writer, and Mrs. James Cromwell, the former Doris Duke, are regular patrons of Miss Bryant at her Greenwich Village cat pharmacy.

In addition to her prescription work, which becomes heaviest in winter because that is the season when more felines get sick, Miss Bryant invents toys for her favorite animals. She has thought up cellophane balls that crackle and smell nice to cats. She claims that her mechanical beetles and butterflies will divert cats from catching birds.

Supplies Queer Things

Queerest shop in the world is in London, where a majority of the customers are professors who go in to ask for butterflies' wings, legs of rabbits, samples of the mouth organs of honeybees, or transfer sections of a hydra; and they get them.

If the velocity of a river is doubled, its power to carry objects away is multiplied 64 times.

Power On Farm

Agricultural Engineer Tells How Waste Can Be Prevented

Anyone who has taken the trouble to look up the results of experiments which have been made to ascertain the efficiency with which farm power is utilized knows that in almost every day's work of every tillage operation there is more or less preventable waste of power. Mr. F. N. G. Kramich, an eminent agricultural engineer who has made a life-long study of the utilization of farm power, writes as follows:

"Field tests reveal the fact that improper hitching can add as much as 34 per cent to the draft of a plough. Added to this is the fact that poor ploughing is bound to result from such hitching. Poor ploughing not only adds draft, which means added expense because of the increased fuel used, but jeopardizes the crop yields, which means a loss in output and consequently reduced income."

"Tests made to ascertain how the power required in ploughing is distributed among the various operations involved show that 55 per cent of the draft is required to cut the furrow—alone loose, 35 per cent. In the turning of the furrow. The important thing to the farm operator is the fact that it is the job of cutting the furrow alone loose that takes the power. Also, the share is the thing that wears first and most rapidly. Most plowshares are left on the plough until it refuses to work properly. Yet, long before a share reaches this stage it has become sufficiently dull to increase the draft very materially."

Singing Old Hymns

Joy In The Gospel Tunes Of Long Ago

The Boston Transcript says the devil is getting too many hymns! No good new ones are being written.

"Many a man and woman going down the sunset side of life's divide, recall vivid childhood impressions of the fervor with which worshippers in meeting-houses used to sing the long-familiar hymns, especially when the tune was good. With what roaring the grave men, with long beards and shaven pepper-tips, lifted up their voices when singing Luther's 'Fests Burg.' How ecstatically the women, in voluminous skirts with sleek bandeaux of hair drawn over their ears, dwelt upon the crescendo, the dying fall and the refrain of a hymn like 'Come, Thou Fount of Life!'"

"This hearty joy in the Gospel tunes in some way made up to the singers for the repression of worldly-wardness the week. Their lives were in the main drab and uneventful. They were emotionally starved. They might not dance. They might not go to the circus or to the theatre. Playing cards was forbidden."

There was moral death in a mug of beer. The game of authors in winter, croquet in summer, mugged up the sanctioned secular recreations. "Does not this explain why the Sunday meeting-house services and the mid-week prayer meetings were crowded?"

Protection For Money Bag

If Snatched From Carrier Automatic Alarm Rings Continuously

Equipped with an electric bell and small batteries, a money bag now offered sounds an automatic alarm when snatched by a thief. The bag looks like an ordinary satchel, but on the underside of the handle is a trigger which is held in by the carrier's fingers. When the bag is snatched from the hand, however, the trigger is released and an electrical connection is made with the bell which rings continuously as the thief tries to escape, since the trigger cannot be pushed back into place without a key and the key is in the possession of the carrier.—Popular Science.

Had Their Worries

A travelling circus had arrived at a small village, and the townspeople hurried out to look things over. He found three circus hands sitting in dejected silence.

"What's wrong?" asked the village elder.

"The elephant is dead," was the reply.

"I'm sorry, but I'm glad to see you must thought so much of a dumb animal," the villager continued.

"It ain't that," retorted one of the three. "You see, we claps has got to dig the hole to bury him.—C. N. Railways Magazine."

Science has set the probable safe concentration of benzene which a worker may breathe without injury below 100 parts per million.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and might see the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him the way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy and Matthew Adam go Christmas shopping in a neighboring town. On their return to Pine Ridge, Nancy is amazed to see the Columbine residence all lit up, and asks Matthew if he knows why. He said: "Let's go in and see. Then Nancy learns that she is having her debut. But in a different setting than had been planned for her in Boston.

Nancy's parents and friends gave their liberal support to her request for books, and a sizeable box arrived in due course. Father Adam painted a sign for the library, and the boys worked on the shelves for the books and decorations to make the room look presentable.

Jack Nelson, Matthew Adam, and Nancy go to the prairie home of Matthews' uncle for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard.

Now Go On With The Story

CHAPTER XVIII.—Continued

Where that empty milk can came from they never knew; but for a while it created not only diversion, but a feeble warmth that was dearly welcome. With the aid of a pocket knife Jack ripped the leather covering from the seats, and used excelsior stuffing for a seat. School books came next, but not until darkness was descending and all hope of seeing the missing driver was given up.

"I'd go for help," Jack told his sister grimly, "but even if the road weren't drifted, I'd never make it with night coming on. We've been here about four hours, haven't we? It seems a lifetime already, and these youngsters have been here a good while longer. If things aren't better in the morning I'll have to go, Nancy. Have you noticed? (he lowered his voice), "those twins are getting drowsy, both of 'em; and so's Paul Evans. I can't tell whether they're just sleepy, or—or— Look here, sis! It's up to us to keep them moving!"

Darkness came fast; but slowly, terribly slowly, it seemed to Nancy, hour after hopeless hour dragged on. Wild wind still raged about them, and at the back of the bus a snow-drift had collected, sitting in through the broken window and making their cramped space smaller still. Though all worked desperately to keep the fire burning, a sudden, especially fierce gust had blown it out; and

there were no more matches. Jack had long since relinquished his sheep-lined jacket; and Nancy's knitted skirt was pinned securely about a shivering boy.

Pretense at games—prancing up and down the aisle—anything to keep blood circulating in those small, cold kiddies, was kept up valiantly; but as night descended the children who were not crying had dropped asleep, huddled together in a corner, and tears of fright and pity dimmed Nancy's eyes as she looked down at them.

Through that interminable night a grim and silent Jack kept moving constantly, stopping at every turn to rub the legs or arms of some small sleeper. Nancy, exhausted, sat for a time, holding within her coat a boy of seven who whimpered with the cold. Later, when a semblance of warmth returned to him and he dropped asleep, she too arose to move about the crowded quarters, and like her brother, chafe numb hands and feet.

Dawn came at last, and the storm had not abated. "But we're alive," said Nancy, teeth chattering as she tried to speak. "We're all alive."

Jack faced her suddenly. Almost it seemed that he was angry.

"And how long will we last? How long, I ask you?" He raised a foot and she saw a bare leg above the shoe. "I put my socks on Joey Miller three hours ago when you were nodding. That boy's all in, Nancy, and some of these little girls won't live the day through unless help reaches us. If we had food it might put new life into them; but every lunch pail's empty and—"

He stopped, silenced by a moan from some one in the bundled mass, and lifting a child, worked at her stiff legs in desperation. It was, Nancy saw, the twin who wore her sweater; and suddenly the girl was pulling off her woolen stockings while Jack protested: "You keep those on, sis! Say, are you going crazy? Do you want to freeze to death? You're in your thin silk undies now. I know it. I saw you sneak out of that knitted thing a while ago. Damn you, Nancy Nelson, you keep those stockings on!"

Nancy said nothing. Jack was, she understood, half crazed with anxiety for all those helpless children and herself as well. Slipping bare feet into her shoes again, she drew, to pull her warm hose over the icy legs of the small sufferer; while one of the girls, watching in silence, struggled out of her coat and buttoned it about her idle sister.

Nancy threw her a smile, a drawn, sad smile that Cousin Columbine wouldn't have recognized.

"Come help me, Evelyn," she said gently. "We must wake some of the little ones and keep them moving." One after another they got them to their feet, those weary youngsters. Some, unable to understand, protested, weeping. Others did their brave best to help. It was nearly noon when, as the wind subsided, Jack said the words that struck terror to his sister's heart.

"I'm going now, Nancy." His voice trembled a little. "As I see it, there's no other way. Keep up your courage; and for God's sake, Nancy, keep your fingers! Unless the wind starts up again I'll reach that ranch in a few hours."

"And—if you don't?"

"Their eyes met, and Nancy knew her brother realized how slim a chance he had. Her lips trembled; but he made a gesture toward the children.

"I know—but I can't let them die, Nancy, while there's a chance to save them. Bill! (turning to the boy who wore his jacket), "I'm going for help

and it looks as if I'd have to take that coat. No, I won't need the socks" (as the little boy stooped bravely to remove them). "Tom Osgood, you keep the kiddies moving. I'm counting on you older ones to help."

"Look here," spoke up the boy suddenly, "you find a fence, Jack, and follow it if you can. Dad told me once that if ever I got caught out in a blizzard, to find a fence and just hang onto it. And if you run into a mail box you'll know a gate is somewhere near. Gosh! Jack, I—I sorter wish you wouldn't go."

Jack forced a smile. "Now don't you worry, kid. I'll get there sure, so long as the wind stays quiet. You just help Nancy every way you can; and whatever happens, don't go to sleep. Keep thinking that by night we'll be safe home. Good—good—bye—every one!" He did not look at Nancy as he strode away. The girl knew that he did not dare to; and in another moment his tall form was blotted out. What fate would meet him, alone on those terrifying plains, she wondered, tears stinging her eyelids. And with a clutch of fear, was the wind rising?

Time passed, interminable hours that seemed unending. The dreaded wind died down, returned, and died again, not to return. No one could say just when the blizzard ceased, for one by one the children were succumbing to the portentous drowsiness. Once Nancy succumbed herself, to be aroused by the frantic, pounding fists of Tommy Osgood.

The cold was still intense when that second dusk approached the prairies; but the whimpering voices were hushed in an ominous silence. Most of the children had given up by now, completely spent with cold, and hunger, and even fright. For there had been strange happenings since Jack's departure. Twice they rejoiced at the sound of approaching horses, only to find that their ears must have deceived them. Two of the children had "seen" the schoolhouse, and, as the mirage faded, burst into tears of disappointment.

Working courageously on icy arms and legs, Nancy knew, a sense of terror creeping through her, that she was giving out. Her eyelids kept closing against her will. At times it seemed impossible to drag them open. Her head were numb; her bare legs curiously lifeless.

(To Be Continued)

High Speed On Roads

Safe Driving Is Public Responsibility

Sir Malcolm Campbell, the world record-holder for auto speed, during the course of a speech at a luncheon given in his honor in New York, declared that fast driving had no place on regular highways and that road safety was a public responsibility. He further added, "I am the last person in the world to suggest high speed on the road." This is excellent advice from one who has proved that he can travel faster than anyone else—Branford Expositor.

A Clever Photographer

Had Brilliant Idea When He Mistaken Customer's Address

A young man living at Weingarten, in Wurtemberg, had himself photographed, but the photographer mistook the address, to which the photograph should have been forwarded. What was the photographer to do? He stuck a proof of the photo on the outside of the envelope and added the words "To this gentleman in Weingarten." The photographs reached their correct destination safely.

Preserving Old Types

Specimens of local breeds that are becoming extinct are to be preserved in the museum at Gloucester, England. A typical Old Gloucester heifer has recently been added, and it is intended to provide representative specimens of several other local breeds. Among those already in mind are a Berkeley two-spot pig, a Cotswold sheep and a Cotswold cat.

Customer—"I want to buy a present for my wife."
Pretty Girl Clerk (in city)—"Could I interest you in a sun-suit?"
Customer—"You certainly could, but let's get the present fixed up first."

Most animals flee at the approach of an aeroplane, but not the lion. A pilot flying low over a lion saw it suddenly spring and tear off a portion of the aleron fabric.

It has been found that eyelashes grow about one-twentieth of an inch each week.

A man could learn a great many things if he didn't think he already knew them. 2118

AIR CELL battery lives on air for 1000 hours..

Here is the "A" battery which has revolutionized the radio industry. It is making the battery set as efficient and as simple to operate as an electric receiver.

Eveready Air Cell needs no recharging. It energizes itself by "breathing" oxygen—it literally "lives on air" for 1000 playing hours.

With the Air Cell there is no gradual slackening of power which so often spoils radio reception. It maintains itself at full strength to the end.

Don't envy your city friends who have electrically operated radio sets. Now you can have the same clear reception with no trouble or bother. That is, if you buy a new Air Cell Radio.

These new sets, now made by all Canadian radio manufacturers, use the Eveready Air Cell "A" battery which does away with storage batteries and needs no recharging.

The amazingly long life of the Air Cell—with no upkeep costs—gives you true economy.

Eveready Layerbilt "B" Battery is the ideal companion.

Interference Not Allowed

Radio Howlers Will Not Be Tolerated In France

France is conducting a vigorous campaign against radio "howlers," people who interfere with their neighbors' radio reception. In one month the French Ministry of Posts and Telegraphs has caught and punished 13,465 howlers. It is an offense in France to hinder radio reception, and the purchase of what is called "anti-parasitic" apparatus is obligatory in cases where refrigerators, elevators and similar equipment cause inconvenience.

Teacher: "Give me an explanation of three punctuation marks."
Boy: "A comma is the brake that slows down the speed; an exclamation point is an accident, and a period is a bumper."

Birds' nests used by the Chinese for making into soup are about the size of an oyster-shell and it takes thirty-two to weigh a pound. The soup costs about \$2.50 a bowl.

Will Not Face Storm

Experiment Was Conducted In France With Carrier Pigeons

Carrier pigeons won't carry on in a storm thus shattering another cherished illusion of devotion to duty. An experiment was carried out by French military experts and pigeon fanciers in the Basces-Landes radio station here where atmospheric conditions similar to an electrical storm were produced. This was done by generating powerful "charged" Hertzian waves of 200 amperes. At the same time several hundred military pigeons were released from their coots. Sensing an electrical storm, the pigeons hovered about the aerial a few minutes, then flew right back to their coots. They refused to budge until the "storm" was over.

Teacher: "Who was Homer?"
Student: "I am not sure, but I think he was the fellow who wrote the 'Ollad' and the 'Idilly'."

The elephant seals are the biggest of seals some attaining a length of 17 feet.

Little Helps For This Week

Even so Father, for so it seemed good in Thy sight. Matthew 11:26.

Let nothing make thee sad or fretful.
Or too regretful;
What God hath ordered must be right.
Then find in it thine own delight.

If we listen to our self-love we shall estimate our lot less by what it is than by what it is not, shall dwell on its hindrances and be blind to its possibilities, and comparing it only with imaginary lives shall indulge in flattering dreams of what we would do if we had the power, give if we had wealth, and be if we had no temptations. If we yield ourselves unto God and sincerely accept our lot as assigned by Him, we shall count up its contents and disregard its omissions, and be it as feeble as a cripple's or as narrow as a child's, we shall find in it resources of good surpassing our greatest aims, and sacred claims that will keep awake our highest will.

1 SAW—G. K. Alenby raving on Broadway over the fact that his Calgary sock quilt had sold after earning it a price of a new coat and claimed she was going back to Calgary to go on relief again.

ALONG BROADWAY
 Donald McCaskill has a story about frozen wheat that was laying the boys out in the aisles when they heard it. Fred Patchell was remarking upon the folly of some people who spend a small fortune on music lessons only to discover that they cannot produce better music than a bull-bully with a comb and a t. paper. The bald-headed Brigade was conspicuous by its absence from the dance last Saturday night, must be close season on chickens.

"Heavy" Williams is wondering if he rented the sacker room in the Bank. Frank Browne was exercising his fine bass voice the other evening and wailing a few members of the Owls Club for the purpose of learning the latest stories, it seems that the remarkable Frank was going to a dance at Dartique Hall that evening so he was getting primed. The boys of the Legion were in town Sat. night and fought the war over again as usual.

The young bloods were turkey-trotting all over the lot Sat. night, better check over your parsnip wine mother. Bob Ure and Jimmie Dickson discussing the latest biography of Mary Queen of Scots, and reviewing the entire history of the Stuart family, before the lights went out. Andy Franks and Hughie McIntyre captured Viny Ridge unaided.

Was you there Charlie? G. Y. McLean running a chicken down, a registered Leghorn. Mrs. (Winnie) McFadyen will be greatly missed on Broadway as she is taking a two month's well earned holiday.

Dr. Whillians witnessed the showing of the Louis Baer fight pictures at Calgary Monday. The doctor states that Baer was beaten before he started, and showed nothing at any time. Threshing and baselard are the main topics of interest here at the present time.

Social Credit and Ontario

The following is taken from the Clinton News Record. Clinton is only a few miles from Seaford, Ontario, where Premier Aberhart made his famous binder twine sack speech.

"We fear that Premier Aberhart is allowing himself to be over-estimated when he reports on his return to Alberta that 'Ontario is wild for Social Credit.' The majority of Ontarians are quite content to allow Alberta to work out its Social Credit experiments before taking it seriously. We are keeping an open mind."

To Compete at Track Meet

The following contestants from the Crossfield School will compete at the Inter School Track Meet at Olds on Friday of this week.

Nora Fleming, Marjorie Gordon, Vida McMillan, Clark McMillan, Lester Hopper, Adeline Carmichael, Arlene Amory, Warren Hall, Cora Hall, Margaret Cameron, Irene Walker, Paul Bills, Norman Bills, Jean Carmichael, Violet Currie, Alice Gilson, Jimmie Stevens, Eileen Arnott, George Fleming, Kenneth Miller, Earl Hopper, Elsie Mossop, Charles Russell, Edith Griffiths, Arthur Baker, David Wylie, Norma Miller, Gavin Goldie, Verna Pogg, Velma Pogg, Jack Williams.

Hughie McIntyre is leaving today to spend the winter at his old home at Avonmore. On Mr. McIntyre's father has been in poor health and Hughie plans to spend the winter with him.

Chas. Mielond

LOCAL NEWS
 Hughie McIntyre sold "The Toboggan Ranch," a half section 9 miles west of Crossfield to Claude Walroth. The deal was closed today, the price was not divulged.

Threshing has gone on steadily during the past week with ideal weather. Some yields and grades are disappointing, but in the immediate district there is a lot of good grain and the increased price will help a lot.

Business must be on the up turn if one is to judge from the capacity crowd in town last Saturday. Stores and garages were thronged until a late hour—local tonsorial parlours unable to cope with the demands of patrons—large crowd at the dance—local restaurants hard put to serve all comers. May this state of affairs continue.

Straight Talk

The grain handling organization that has fought for the grain growers' rights when its own welfare was jeopardised in so doing is worthy of grain growers' support.

That organization is the Alberta Wheat Pool.

You can support it by patronizing

Alberta Pool Elevators.
